

CannSecure Solutions from CustomVault We're Not Just Blowing Smoke

When it comes to controlled substance security, **CustomVault** is the industry expert. We have over 30 years of experience and leadership in pharmaceuticals, and have been offering solutions for the cannabis industry since 2009. We know what we are doing. Our security equipment goes far beyond vaults, and includes:

SAFES

A key component of physical security for any cannabis dispensary or growing facility, safes can be used to store both cash and product. But there are a few things to keep in mind...

WHEN IT COMES TO PRODUCT:

- Cannabis is best when aged in a cool, dark place. Too much heat and humidity can result in product deterioration, bacteria, mold and mildew. What does that mean? Keep your safe interior below 77 degrees Fahrenheit (ideally 65-75 degrees) and aim for 62% relative humidity in order to preserve product quality.
- A gun safe won't cut it. Gun safes do not meet federal safe storage requirements that apply to cannabis as a Schedule I drug. Furthermore, they are often lined with moisture retaining wallboard, making it extremely challenging to maintain humidity controls.
- A TL (tool resistant) or TR/TL (torch and tool resistant) is your best bet for compliant product security. It also ensures

optimal temperature and humidity levels. **CustomVault** offers standard sized units with security ratings of TL-15, TL-30 and TR/TL 30. Sizing can also be customized to ensure the best fit with your business. Notably:

- TL-15 resists break-in for up to 15 minutes given efforts with hand tools, picking tools, mechanical or portable electric tools, grinding points, carbide drills, and pressure-applying devices.
- TL-30 resists break-in for 30 minutes with all of the tools mentioned above.
- TR/TL-30 has all of the same capabilities as the TL-30, and also protects against oxy-fuel and gas-cutting or welding torches.

CannSecure Solutions from CustomVault

WHEN IT COMES TO CASH:

- A UL safe is what many banks and credit unions use nationwide to ensure that their cash is protected and secure. That said, some cannabis businesses store both product and cash in the same safe, and many seek to exceed the banking norm given the importance of cash in their business. The TL or TR/TL alternative is the gold standard when it comes to protection. **CustomVault** provides UL, TL and TR/TL alternatives; all customized to meet your needs.
- Cash intensive businesses like dispensaries sometimes use drop safes as a complement to traditional safes. **CustomVault** can install drop safes right at the counter, allowing employees to minimize cash exposure in the drawer by depositing more regularly into the safe itself.

DROP SAFE

TL SAFE

UL SAFE

CUSTOMVAULT SAFES ARE ALWAYS...

- Customized to meet the needs of your facility
- Compliant with federal regulations as applicable to Schedule I and II pharmaceuticals, including cannabis - we only use TL or TR/TL classified equipment for product storage
- Secured to the floor
- Equipped with time lock devices and locking mechanisms
- Equipped with alarm contacts and seismic sensors
- Tied into your electronic security response network
- Available with customized interiors to accommodate your needs including shelves, compartments, lockboxes etcetera
